

\mathcal{P} : Périmètre - \mathcal{A} : Aire

Le carré

$c = \text{Côté}$

$$\mathcal{P} = 4 \times c$$

$$\mathcal{A} = c^2$$

Le rectangle

$L = \text{Longueur}$ et $l = \text{largeur}$

$$\mathcal{P} = 2 \times L + 2 \times l$$

$$\mathcal{A} = L \times l$$

Le triangle rectangle

$$\mathcal{A} = \frac{a \times b}{2}$$

Le triangle

$b = \text{base}$ et $h = \text{hauteur}$

$$\mathcal{A} = \frac{b \times h}{2}$$

Le parallélogramme

$$\mathcal{P} = 2 \times a + 2 \times b$$

$$\mathcal{A} = b \times h$$

Cercle et disque

$R = \text{Rayon}$ et $d = \text{diamètre}$

$$\mathcal{P} = 2\pi R = \pi d$$

$$\mathcal{A} = \pi R^2$$
